

Educate, Market & Train

with custom
scale models

Service and Manufacturing Corporation designs and constructs scale models of industrial and commercial facilities, such as the one shown above. It features:

- Model of a 450 feet long x 250 feet wide barge mounted chemical plant scaled down to 4.5 feet x 2.5 feet.
- Sufficient details of components enabling the model to be ideal for education, marketing or training purposes.
- Components made from high quality natural and synthetic materials.
- Fully enclosed display case using high grade Plexiglas and wood to protect the model.
- Light weight yet durable shipping case complete with recessed handles, latches and reinforced corners.
- The cost of such models are surprisingly small and greatly depend upon the desired details, materials of construction and intended use.

Additional features that can be incorporated in the models include working or movable parts, lighting by fiber optics or LED, audio and video, audio or video playbacks, interactive push buttons, programmable controls to activate various features, etc

Our clients have said:

- "This model really gives you the touch and feel effect and a better sense of proportion, unlike computer models."
- "We use this as a sales tool and to train our users and operators."
- "I wish we had made similar models earlier for our other products."
- "It is amazing that so many details can be shown clearly on a compact size model like this one."
